

CLIENT CASE STUDY >>>

Deploying a Repeatable Aircraft Inspection and Technical Audit Monitoring Program

CHALLENGE

A **global aircraft lessor** was challenged in managing the day-to-day asset management-related audits for its aircraft fleet and needed to establish mid-term inspection schedules.

Zeevo deployed a **Repeatable Aircraft Inspection and Technical Audit Monitoring Program** supported by a **Technical Monitoring Scorecard** based on various qualitative and quantitative criteria and classifications.

>>> APPROACH

- ▶ Deployed Zeevo's Aircraft Status Monitoring methodology to facilitate the complexities of asset management
- ▶ Risk ranked lessees against various factors to determine tiers and required asset monitoring intervals
- ▶ Developed a user form to score each lessee and SQL Server query to access system data, e.g., Leasepoint® and automate analysis
- ▶ Created adjustable mid-term audit schedules based on the lessee's audit tier to track historic and future audits

>>> OUTCOME

- ▶ The client benefited from bespoke, robust, and flexible tools for classifying lessees and the weight of each criterion
- ▶ Delivered tools allowed for real-time adjustments based on evolving requirements and circumstances
- ▶ Effective management of lessee relationships with insights gained from audit schedules
- ▶ Created repeatable training material and instruction manuals, including video tutorials

ZEEVO'S VALUE ADD

- ▶ Protected asset value by designing and implementing a comprehensive, repeatable asset status monitoring program, involving setting audit objectives, instilling end-to-end processes, and establishing communication protocols
- ▶ Improved controls and risk management, promoting transparency and ensuring access to quality information
- ▶ Advanced the client staff's coding and software development skills to create tools to meet business requirements
- ▶ Developed repeatable training materials to keep the client staff trained on a "go-forward" basis
- ▶ Availed the client organization of Zeevo's deep expertise and experience in audit planning, software development, Leasepoint, and SQL Server
